

🎵 Title: The Four Building Blocks of Accounting Math

Verse 1:

Accounting starts with simple ways,
Four basic tools will light your days.
Addition shows the total view,
Of costs and sales — that's revenue!
Subtraction finds what's left behind,
When expenses cross your mind.
Multiply for taxes, pay,
Divide to split the cost today!

Chorus:

Add the totals, check the line,
Subtract to see your profit shine.
Multiply the rate and hour,
Division gives the number's power!
From gross pay down to take-home pay,
These four steps lead the way.
Learning's clearer, we can tell—
With Accounting Compass from SEE-KA-EL

Verse 2:

Cris goes café hopping 'round,
Adds each peso, every pound.
Coffee, pastry, gas in line,
Her total's clear—five-eighty-nine!
Then Zyrine's pay slip comes to play,
Gross pay less deductions—take-home today!
Patricia counts her project buys,
Her cost adds up before her eyes.

Chorus:

Add the totals, check the line,
Subtract to see your profit shine.
Multiply the rate and hour,
Division gives the number's power!
From gross pay down to take-home pay,
These four steps lead the way.

Learning's clearer, we can tell—

Bridge:

Profit margin, neat and clean,
Is profit ÷ revenue, times one hundred seen.
Average cost, or cost per friend,
Division helps from start to end.
Payroll math or revenue streams,
Accounting's simpler than it seems!
No need to fear those figures tall—
Addition and friends can solve it all!

Final Chorus (Reprise):

Add your numbers, make them right,
Subtract your costs, your profit's in sight.
Multiply and divide with care,
You'll find the truth that's always there!
From Tokyo, Cali, Manila's way,
The math of business saves the day.
Numbers tell a story well—
With Accounting Compass from SEE-KA-EL
